

# ALYVIX TRAINING

DAY 1

DAY 2

## ALYVIX BASIC PRINCIPLES

---

### **Automation and monitoring of any application**

- Critical user transaction
- Visual Synthetic Monitoring
- Alyvix Solution

### **Graphic detection and interaction**

- One transaction, one custom keyword, one performance
- Alyvix custom keywords: types, components, region of interest
- Alyvix Object Finder: multi-type components
- Interaction modes: mouse clicks and keystrokes

### **Performance measurement and outputs**

- Transaction thresholds and performance
- Command line output and HTML report
- Performance database and Windows Performance Monitor

## TEST CASE BUILDING

---

- **Test case editor** (basic operations, editor buttons and shortcuts, test case editing)
- **Test case sections** (main body, setup section, tear-down section)
- **System keywords** (process keywords, Window keywords, I/O keywords, performance keywords, timestamp keywords, network keywords, screenshots keywords, debug keywords)
- **Visual keywords** (keyword definition, Alyvix finders, Alyvix scrapers)

## ADVANCED TOPICS

---

- **Backup and distribute test cases**
- **Test case logic** (variable definition, conditional and loop)
- **Encryption tool** (Alyvix Crypto Utility)

## HANDS ON - CUSTOM APPLICATION

---

- **Customer requested test case building**
- **System monitoring integration**

## CONTACTS

---

 Via Kravogl 4, 39100 Bolzano, Italy
